DECISIONLOGIC

Integration Status Codes

This numeric value indicates the status of the Request and is referenced in our APIs and webhooks.

Code	Description	Status Code Color
-3	Other Error (Request failed due to some other system failure. Generally, an error not related to a data provider.)	Red #CC3333
-2	Financial institution Error (Requests that failed while attempting to get data from the financial institution)	Red #CC3333
-1	Account Error (Requests that failed because of an account error, including invalid credentials, account is closed, etc.)	Amber #FFBF00
0	Not Started (Requests that have been created but never started).	Light Gray #D0D0D0
1	Started, Not Completed (Requests that have been started by the end user but not completed)	Dark Gray #A0A0A0
3	Login Verified (Requests that were completed where the end user was able to login to their financial institution account, and met the profile's verification standard)	Dark Green #228822
Code	**Refresh Notification Status Description**	
600	Refresh Successful (Request refresh has completed, you can pull the new transaction data available)	
601	Refresh Failed (Request refresh could not be completed, review request notes for further details)
